1. Introduction

This document describes the Implementation Guidelines for the XML Bank to Customer Statement message ISO20022 - “camt.053.001.02” in the Netherlands.

The purpose of these Implementation Guidelines is to provide guidance on the use of Bank to Customer Statement Message sent by banks, residing in The Netherlands. These guidelines for Bank to Customer Statement are compliant with the Bank to Customer Statement message ISO20022.

These Implementation Guidelines have been developed by the Dutch banks together with the Dutch Banking Association (NVB).

This publication has been prepared with the utmost care. Nevertheless, the NVB can by no means be held responsible for any loss or damage incurred to any incorrect or incomplete information contained in this document.

Please contact your bank for any further information.

2. Coverage

The Bank To CustomerStatement message (camt.053) is sent by the account servicer to an account owner or to a party authorised by the account owner to receive the message. It is used to inform the account owner, or authorised party, of the entries booked to the account, and to provide the owner with balance information on the account at a given point in time.

The Bank To Customer Statement message can contain reports for more than one account. It provides information for cash management and/or reconciliation. It contains information on booked entries only. It can include underlying details of transactions that have been included in the entry. The message is exchanged as defined between the account servicer and the account owner. It provides information on items that have been booked to the account as well as balance information.

Depending on services and schedule agreed between banks and their customers, statements may be generated and exchanged accordingly, for example for intraday or prior day periods. It is possible that the receiver of the message is not the account owner, but a party entitled through arrangement with the account owner to receive the account information (also known as recipient).

3. General Principles

Contents of the message

- The message can hold the reporting on one or more accounts;
- The contents of the message will be limited to information about the transactions that have been entered into bookkeeping;
- Reporting will be done in the account currency. Any transaction in an other currency first will be converted into the account currency;
- Reporting as for the transactions that have been entered into bookkeeping, will be carried out through MX camt053.001.02 BankToCustomerStatementV02;
- The message can be split up into several messages depending on the volume of data to be transferred.

Periodicity of the message

- As a matter of principle, a message will be created each bank working day when transactions are taking place. Exceptionally, this may also be the case on a day without any transactions;
- It will be possible for some banks to send a message, at their customers' request, which contains the reporting as for different dates (on a weekly, monthly, ... basis).

Aggregating of transactions

- This principle has been adopted for 'customer' aggregating (e.g. a data record for invoicing or a data record for the payment of salaries or for paying suppliers for which a single amount is credited or debited to the customer) as well as for 'bank' aggregating, e.g. the total amount of a series of money transfers for which aggregating is acquired.
- The details of these aggregating can be sent as well in the full message as in a separate message.

4. Use of these Guidelines

Each item of the Bank To Customer Statement message refers to the corresponding index of the item in the UNIFI (ISO 20022) Message Definition Report for Cash Management - Bank-to-Customer Reporting. This Report can be found on www.iso20022.org, under "Catalogue of ISO 20022 messages", with "camt.053.001.02" as reference.

This document is based upon the UNIFI (ISO 20022) XML message standards, the Standards MX Message Implementation Guide Payment Initiation¹ and the EPC188-09 Recommendation on Customer Reporting SCT and SDD document². In addition the Dutch specific usage rules are added.

The description of each Message Item contains:

Index	Number that refers to the corresponding description in the UNIFI (ISO 20022) Message Definition Report for Bank-to-Customer Cash Management
XML Tag	Short name that identifies an element within an XML message, that is put between brackets, e.g. <Amount>
Occurrences	<p>This indicates whether an element is optional or mandatory and how many times the element can be repeated. The number of occurrences is shown in square brackets</p> <p>For example:</p> <p>[0..1] shows that the element can be present 0 times or 1 time. The element is optional</p> <p>[1..1] shows that the element has to be present 1 time. The element is mandatory</p> <p>[1..n] shows that the element is mandatory and can be present 1 to n times</p> <p>An element, that is part of a block of elements, is mandatory as far as the block it is part of, is present in the message.</p> <p>If only one of several elements may be present, this is indicated by {OR ... OR} before the elements concerned.</p>
Format	This specifies the permitted values and format
Definition	This contains the definition of the message block or element
Usage ISO	Additional info how this element must be used according to the ISO standards
MT940	Corresponding field in MT940 message
Usage EPC	Any specific rules that could impact the presence or the values of an element as set in the SEPA Credit Transfer scheme customer-to-bank implementation guidelines
Usage NVB	Any additional rules as set by the NVB specific for the Dutch community

5. Character set

The characters allowed in the UNIFI messages are those of the UTF8 standard. However, only the set of Latin characters generally used in international communication, is generally supported. It contains the following characters:

a b c d e f g h i j k l m n o p q r s t u v w x y z
A B C D E F G H I J K L M N O P Q R S T U V W X Y Z
0 1 2 3 4 5 6 7 8 9
/ - ? : () . , ' +
Space

6. Message Structure

The description of the XML document models can be found in a number of schemes. A specific description language (XSD) is used in those schemes. The schemes make it possible to give a description of the tags in the document, the structure and sequence of those elements (hierarchy of tags) as well as the codes which are allowed for some specific data, the number of possible cases, the obligatory or optional character of some of the data, etc.

The general XSD for camt.053.001.02 can be downloaded from www.iso20022.org, under "Catalogue of ISO 20022 messages", with "camt.053.001.02" as reference.

A file containing an XML- camt.053.001.02 message has the following structure:

```
<?xml version="1.0" encoding="UTF-8"?>
<Document xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xmlns="urn:iso:std:iso:20022:tech:xsd:camt.053.001.02">
  <BkToCstmrStmt>
    ...actual message...
  </BkToCstmrStmt>
</Document>
```

A file contains one single Document (envelope). Depending the service of your bank:

- a file may consist of one or more XML messages.
- a XML message may consist of one or more Bank to Customer Statements

The Bank to Customer Statement message is composed of 2 building blocks:

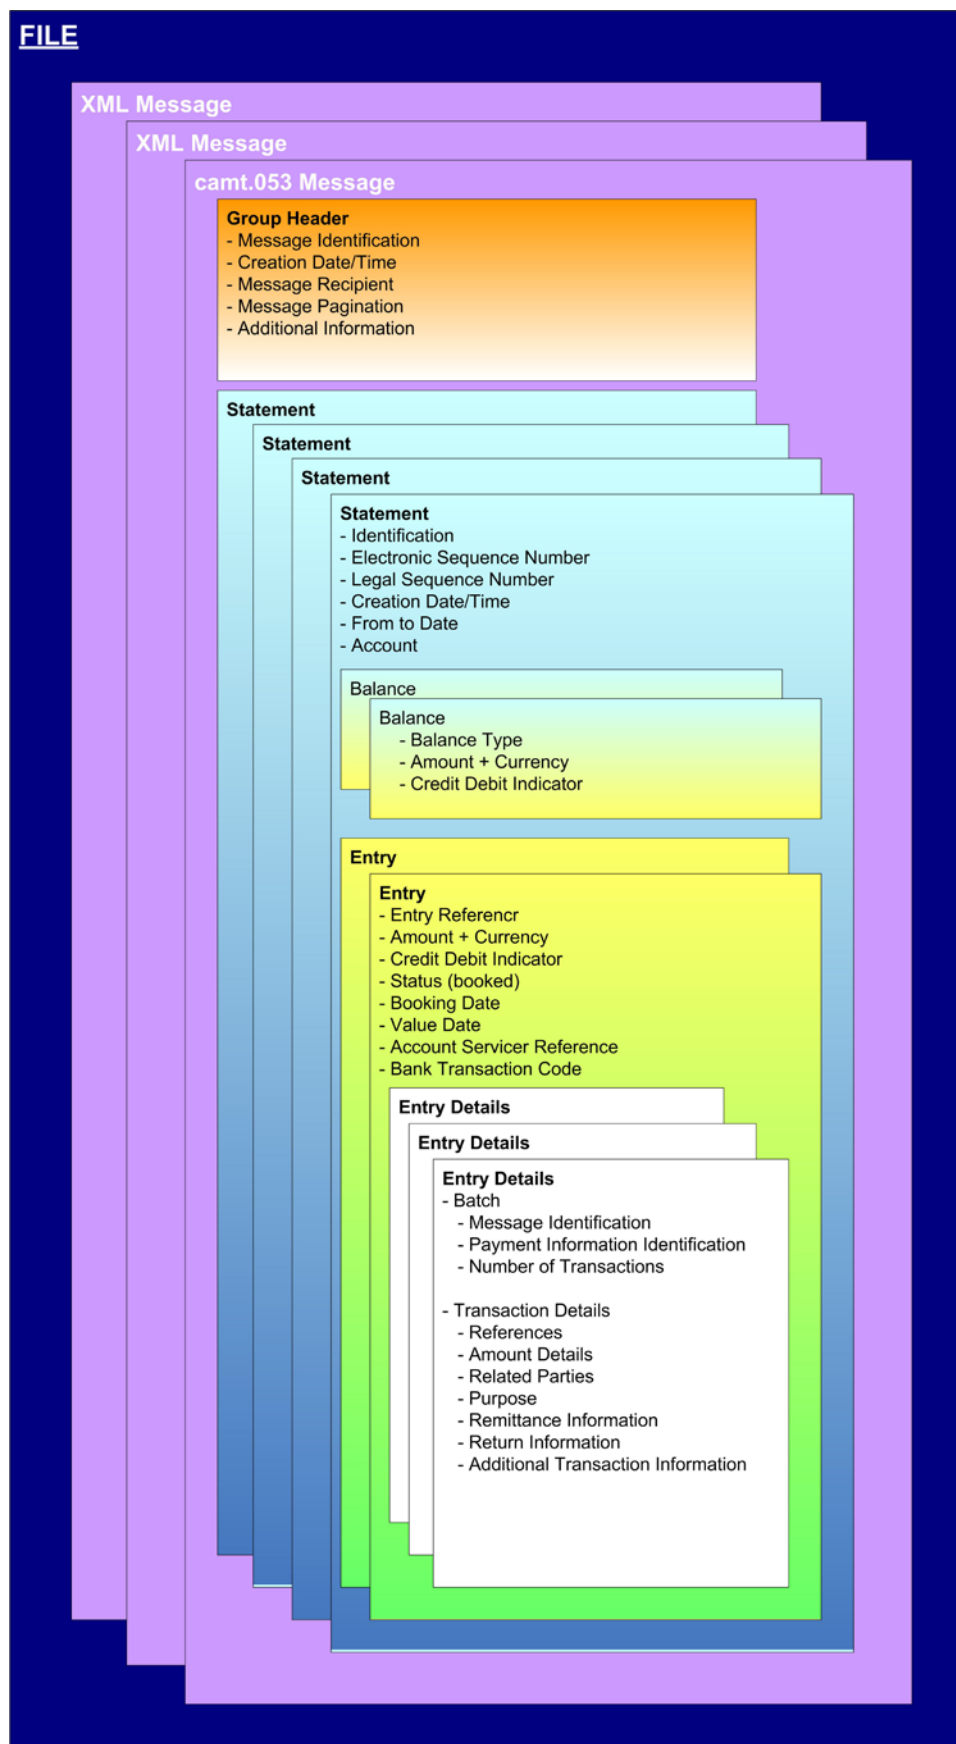

A. Group Header: This building block is mandatory and present once. It contains elements such as Message Identification, Creation Date and Time.

B. Statement: This building block is mandatory and repetitive. It should be repeated for each account on which a statement is provided. The report contains components such as Balance and Entry.

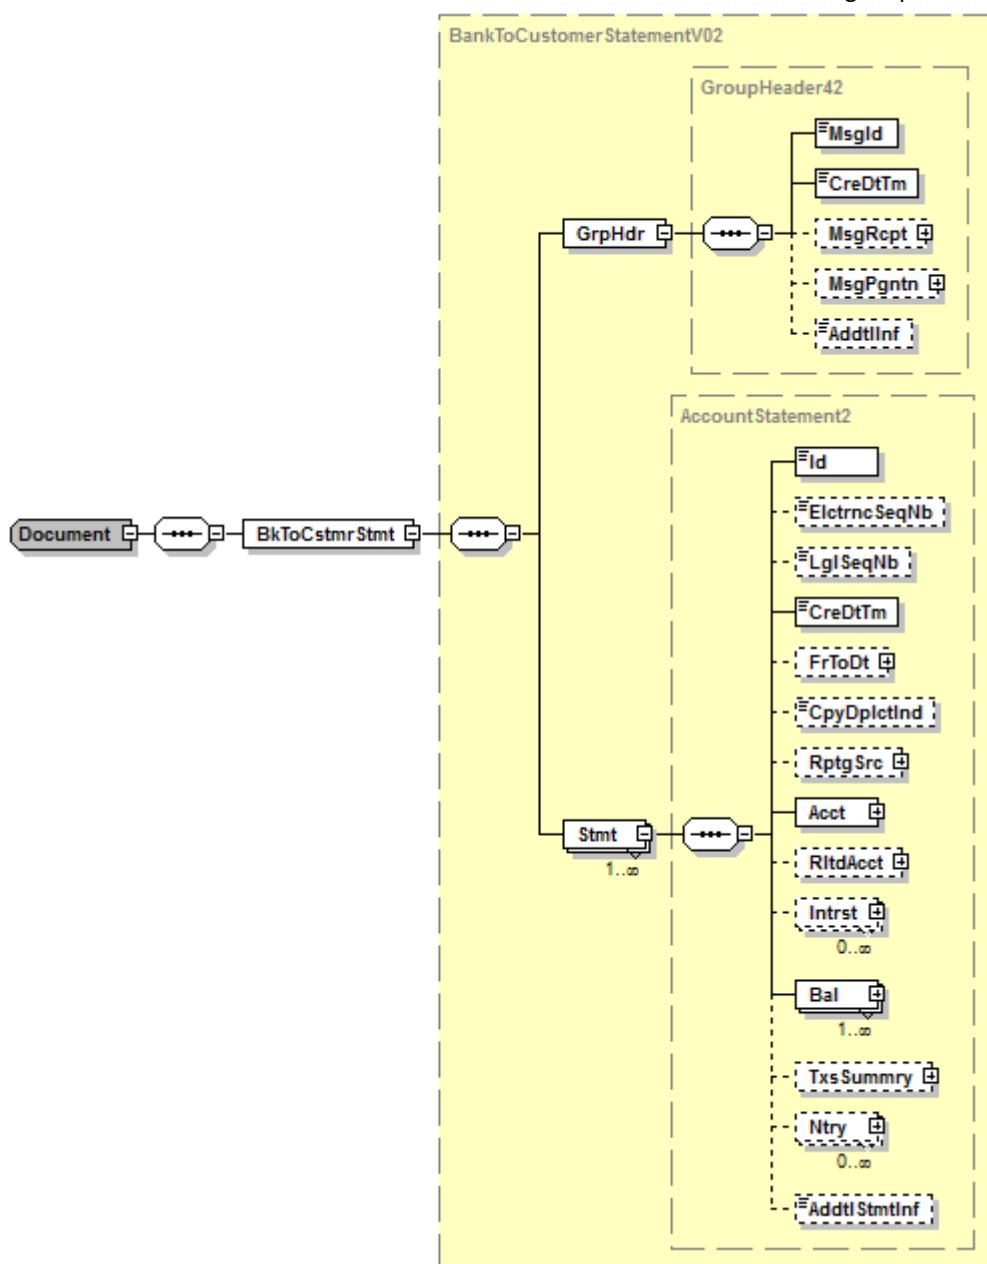

At the request of their customers, some banks will have the possibility of generating messages with the following characteristics :

- a message for one account for one bank working date. This message will contain a GroupHeader-block and one Statement-block
- a message for several accounts for one bank working date. This message will contain a GroupHeader-block and for each account one Statement-block
- a message for one account for several bank working dates. This message will contain a GroupHeader-block and for each bank working date one Statement-block
- a message for several accounts for several bank working dates. This message will contain a GroupHeader-block and for each account for each bank working date one Statement-block :

The diagram below illustrates the possible structures of the Bank To Customer Statement.

A detailed XML view on the structure of a Bank to Customer Statement Message is presented below.

Legend:

Box with full-line is a **mandatory** Message Element

Box with dotted line is an **optional** Message Element

The Child Elements must appear in the **sequence** mentioned

Only one of the possible Child Elements may be present (choice)

7. Principles governing the structure of reporting

Information registered under the 'Entry' item – 2.76 :

- both for simple and aggregated transactions, information can be retrieved from the following items :
 - Amount - 2.78 item : the net amount that has been booked
 - Creditdebitindicator – 2.79 item : the direction of the transaction
 - Reversalindicator – 2.80 item: the question whether one is dealing with a correction in writing or with R-transactions (SCT-SDD)
 - Status – 2.81 item : always 'booked' in the EoD reporting
 - BookingDate – 2.82 item : the booking date of the transaction
 - ValueDate – 2.83 item: the value date of the transaction
 - BankTransactionCode – 2.91 item : the transaction type

Information registered under the 'Entry details' item – 2.135 :

- as for a single transaction, information can be retrieved from the following items :
 - TransactionDetails – 2.142 item : any additional information about the transaction
- as for aggregated transactions, information can be retrieved from the following items :
 - Batch – 2.136 item : all batch elements
 - TransactionDetails 2.142 item: all information about the details of a globalised transaction
 - AdditionalEntryInformation - 2.314 item: additional information, if any, about the transaction

Bruto / gross aggregated amounts versus net / gross aggregated amount :

Rejected transactions originating from a batch, are generally treated in the 'Bruto' way of working. Bruto means that the total amount of the batch is always reported. Rejects are reported as contra postings (as singles or aggregation)

Example:

- SCT Batch of 10 transactions with of 10 Euro, 2 rejections
- Total amount reported on batch entry 2.136 is 100 Euro Debit
- 2 singles of 10 Euro reported Credit (as 2 single or as 1 aggregated entry)

Rejected transactions originating from a batch, can also be (depending of the services of your bank) be treated in the 'Netto' way of working. This is currently the case for Incasso NL.

Netto means that the total amount of the batch minus the rejects is reported. Rejects are reported separately in a reject reporting. For Incasso NL this was the 'Verwinfo', the Unifi standard is the PAIN.002 format.

Example:

- SCT Batch of 10 transactions with of 10 Euro, 2 rejections
- Total amount reported on batch entry 2.136 is 80 Euro Debit
- 2 rejects of 10 Euro reported separately in a PAIN.002 message

See Annex E PAIN.002 (rejects) fields and usage rules for format PAIN.002

Reporting of costs, fees and taxes :

If for a single transaction costs, fees and/or charges are part of the Transaction Amount (item 2.78), the cost, fees and/or charges are specified in the Amount Details (item 2.172) under the Transaction Details section.

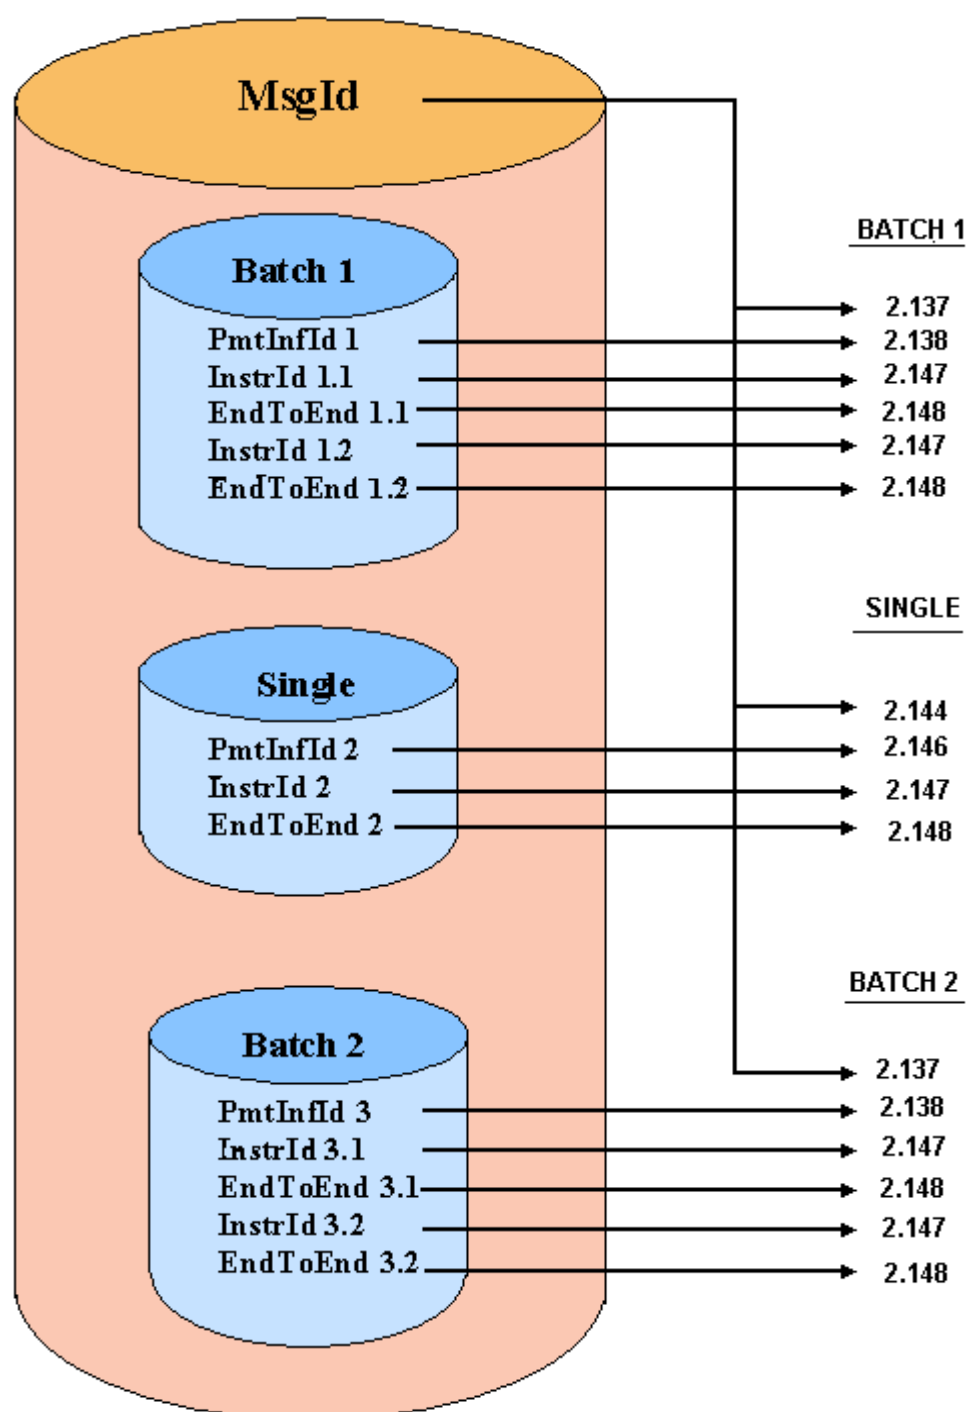

Reporting of Customer References from Pain-messages to initiator:

A Pain-message can contain different customer references such as MessageIdentification, PaymentInformationIdentification, InstructionIdentification and EndToEndInformation. If they occur in a Pain-message transaction, they will be reported as follows :

- For single transactions in the following items :
 - Under the References – 2.143 item :
 - MessageIdentification – 2.144 item
 - PaymentInformationIdentification – 2.146 item
 - InstructionIdentification – 2.147 item
 - EndToEndIdentification – 2.148 item
- For aggregated transactions :
 - Under the Batch – 2.136 item :
 - MessageIdentification – 2.137 item
 - PaymentInformationIdentification – 2.138 item
 - Under the References – 2.143 item :
 - InstructionIdentification – 2.147 item
 - EndToEndIdentification – 2.148 item

XML REPORTING

Reporting of the TransactionsSummary – 2.43 item:

An example: Let's assume we have to report the following transactions in a statement :

+ 100,00
+ 100,00
+ 100,00
+ 100,00
- 200,00

The reporting of the TransactionSummary – 2.43 item will be as follows :

<TxSummary>	
<TtlNtries>	
<NbOfNtries>5</NbOfNtries>	
<Sum>600.00</Sum>	→ The sum off all transactions, regardless whether they are credit- or debet-transactions.
<TtlNetNtryAmt>200.00</TtlNetNtryAmt>	→ The sum off all transactions, taken in account whether they are credit- or debet-transactions.
<CdtDbtInd>CRDT</CdtDbtInd>	→ Indicates whether the total net entry amount is a credit or a debit balance.
</TtlNtries>	
<TtlCdtNtries>	
<NbOfNtries>4</NbOfNtries>	→ Number of individual credit entries included in the report.
<Sum>400.00</Sum>	→ Total of all individual credit entries included in the report.
</TtlCdtNtries>	
<TtlDbtNtries>	
<NbOfNtries>1</NbOfNtries>	→ Number of individual debit entries included in the report.
<Sum>200.00</Sum>	→ Total of all individual debit entries included in the report.
</TtlDbtNtries>	
</TxSummary>	

Miscellaneous

▪ Splitting up of messages

- Depending on the information volume to be transferred, it will be possible to split up the message into several messages in accordance with the pagination rules mentioned.

8. Usage rules as determined by the NVB

Usage rules SCT

This table describes the usage rules NVB for reporting SEPA Credit Transfers. For the SCT and different related R-transaction (initiation or received) the relevancy of a usage rule is indicated by the 'X' in the columns.

XMLTag: <RvslInd>
 Presence: [0..1]
 Definition: Indicates whether or not the entry is the result of a reversal.
 Usage: This element should only be present if the entry is the result of a reversal.
 If the CreditDebitIndicator is CRDT and ReversalIndicator is Yes, the original operation was a debit entry. If the CreditDebitIndicator is DBIT and ReversalIndicator is Yes, the original operation was a credit entry.
 Data Type: *One of the following TrueFalseIndicator values must be used:*
 MeaningWhenTrue: True
 MeaningWhenFalse: False

2.81 Status

Sts

XMLTag: <Sts>
 Presence: [1..1]
 Definition: Status of an entry on the books of the account servicer.
 Data Type: Code
One of the following EntryStatus2Code values must be used:

Code	Name	Definition
BOOK	Booked	Booked means that the transfer of money has been completed between account servicer and account owner Usage : Status Booked does not necessarily imply finality of money as this depends on other factors such as the payment system used, the completion of the end-to-end transaction and the terms agreed between account servicer and owner. Status Booked is the only status that can be reversed.
INFO	Information	Entry is only provided for information, and no booking on the account owner's account in the account servicer's ledger has been performed.
PDNG	Pending	Booking on the account owner's account in the account servicer's ledger has not been completed. Usage : this can be used for expected items, or for items for which some conditions still need to be fulfilled before they can be booked. If booking takes place, the entry will be included with status Booked in subsequent

account report or statement. Status Pending cannot be reversed.

2.82 BookingDate

XMLTag: <BookgDt>

Presence: [0..1]

Definition: Date and time when an entry is posted to an account on the account servicer's books.

Usage: Booking date is the expected booking date, unless the status is booked, in which case it is the actual booking date.

Type: This Message Item is composed of one of the following DateAndDateTimeChoice element(s):

Or	Message Item	<XMLTag>	Mult.	Represent./Type

2.83 ValueDate

XMLTag: <ValDt>

Presence: [0..1]

Definition: Date and time at which assets become available to the account owner in case of a credit entry, or cease to be available to the account owner in case of a debit entry.

Usage: If entry status is pending and value date is present, then the value date refers to an expected/requested value date.
For entries subject to availability/float and for which availability information is provided, the value date must not be used. In this case the availability component identifies the number of availability days.

Type: This Message Item is composed of one of the following DateAndDateTimeChoice element(s):

Or	Message Item	<XMLTag>	Mult.	Represent./Type
{Or	Date	<Dt>	[1..1]	DateTime

Annex F Overview ISO codes

The ISO 20022 Payment messages use 21 'external code lists' which are validated and approved by the Payments SEG.

The listed code values can be used in specific elements of the payments messages as indicated in the documents below. Unlike other ISO 20022 code lists, the code values are not included in the XML message schema with the message element they type. The purpose of externalising these code values is to be able to update the code lists (e.g. add new code values) without impacting the message themselves and, hence, without requiring the development of a new version of the messages that use these code lists.

18 external code lists are published in a spreadsheet which is versioned at three levels: the spreadsheet itself has a publication date, each list within the spreadsheet has a publication date (see 'CodeInventory' sheet) and each individual code value has a date of last update ('status date').

See www.iso20022.org, under “External Code Lists, Data Source Schemes (DSS), Variants and Supplementary Data”, with “Payments External Code Lists spreadsheet” as reference (www.iso20022.org/documents/External_code_lists/Payment_ExternalCodeLists_16August10_v4.xls).
