Introduction

This document describes the Implementation Guidelines for the XML Customer Credit Transfer Initiation message UNIFI (ISO20022) - “pain.001.001.03” in the Netherlands.

The purpose of these Implementation Guidelines is to provide guidance on the use of the SEPA Credit Transfer Initiation Message sent to banks residing in The Netherlands. These guidelines are compliant with:

- ISO20022 – Message Definition Report edition September 2009
- EPC - SEPA Credit Transfer Scheme Customer-to-Bank Implementation Guidelines, version 5.0, issued 1 November 2010 (EPC132-08)

These guidelines can be used as of the date of release and replace all previous versions. No changes will be made anymore to any previous versions.

These Implementation Guidelines have been developed by the Dutch banks together with the Dutch Payments Association ('Betaalvereniging Nederland').

The utmost has been done to make sure the information in this publication is correct. However, the Dutch Payments Association can by no means be held responsible for any loss or damage incurred to any incorrect or incomplete information as described in this publication.

Please contact your bank for any further information.

Change History

New releases of the Implementation Guidelines are published on a regular basis, based on new versions of the underlying standards or to provide clarification where required. The following table provides an overview of the versions released to date.

Version	Date
2.0	October 2010
2.1	February 2011
5.0	January 2012

Versions are numbered x.y(.z). As from this version it has been decided to align the version numbering with that of the implementation guidelines as published by the EPC regarding the SCT. In case a new version of this document is released (mainly as a result of clarifications or error corrections) before the EPC releases a new version of the implementation guidelines, an additional minor release indicator z will be added (e.g. 5.0.1 for an updated version of this document).

The following additions and modifications have been made in version 5.0 compared to version 2.1:

- Added root element "0.0 CustomerCreditTransferInitiation".
- Removed "Rule(s): ChargeBearerRule [...]" from 2.0 and moved it to 2.24.
- Removed "Rule(s): UltimateDebtorRule" from 2.0 and moved it to 2.23.
- Remove usage rules "ChargesAccountRule [...] PaymentTypeInformationRule" since they apply to elements which are not used in the Implementation Guideline.
- Removed "UltimateDebtorGuideline" from 2.0 and moved it to 2.23.
- Corrected various typo's (e.g. replace "paymnet" by "payment").
- Renamed "Rule(s)" to "Usage ISO" on various occasions.
- Added one level ("+") to each message element to bring the annexes in line with EPC Implementation Guidelines.
- Added annex G which gives an overview of applicable usage rules (ISO, EPC and/or NL) per message element.
- Throughout the Implementation Guidelines, the picturess of the following message elements were changed because they conflicted with the occurrence of the element ([1.1], [1.n] or [0.1]). This has been done for the elements 1.7 ControlSum, 2.0 PaymentInformation, 2.3 BatchBooking, 2.4 NumberOfTransactions, 2.5 ControlSum, 2.6 PaymentTypeInformation, 2.7 InstructionPriority, 2.8

ServiceLevel, 2.11 LocalInstrument, 2.14 CategoryPurpose, 2.23 UltimateDebtor, 2.24 ChargeBearer, 2.27 CreditTransferTransactionInformation, 2.29 InstructionIdentification, 2.31 PaymentTypeInformation, 2.33 ServiceLevel, 2.36 LocalInstrument, 2.39 Category Purpose, 2.51 ChargeBearer, 2.70 UltimateDebtor, 2.77 CreditorAgent, 2.79 Creditor, 2.80 CreditorAccount, 2.81 UltimateCreditor, 2.86 Purpose, 2.98 RemittanceInformation, 2.99 Unstructured, 2.100 Structured, 2.120 CreditorReferenceInformation, 2.121 Type, 2.125 Issuer, 2.126 Reference

Coverage

The Customer SEPA Credit Transfer Initiation message is sent by the initiating party to the debtor bank. It is used to request movement of funds from the debtor account to a creditor account.

The Customer SEPA Credit Transfer Initiation message is used to exchange:

- One or more SEPA Credit Transfer instructions;
- Payment transactions that result in a single entry on the debtor account per individual transaction or a batch entry for all transactions in a payment;

The message can be used in a direct or a relay scenario:

- In a direct scenario, the message is sent directly to the debtor bank. The debtor bank is the account servicer of the debtor;
- In a relay scenario, the message is sent to a forwarding party. The forwarding party acts as a concentrating financial institution. It will forward the Customer SEPA Credit Transfer message to the debtor bank.

The message can also be used by an initiating party that has been mandated to send a payment instruction on behalf of the debtor. This caters for example for the scenario of a payments factory initiating all payments on behalf of a large corporate, or an entity administering the salary payments of a company's employees.

Use of these Guidelines

Each item of the CreditTransferInitiation message is referred to the corresponding index of the item in the UNIFI (ISO 20022) Message Definition Report for Payment Standards – Initiation. This Report can be found on www.iso20022.org, under “Catalogue of ISO 20022 messages”, with “pain.001.001.03” as reference (www.iso20022.org/documents/general/Payments_Maintenance_2009.zip).

This document is based upon the UNIFI (ISO 20022) XML message standards and the SEPA Credit Transfer scheme customer-to-bank implementation guidelines. These implementation guidelines can be found on: www.europeanpaymentscouncil.eu/content.cfm?page=sepa_credit_transfer. In addition the Dutch specific usage rules are added.

The description of each message item contains:

Index	Number that refers to the corresponding description in the UNIFI (ISO 20022) Message Definition Report for Payment Standards – Initiation
XML Tag	Short name that identifies an element within an XML message, that is put between brackets, e.g. <Amount>
Occurrences	<p>This indicates whether an element is optional or mandatory and how many times the element can be repeated. The number of occurrences is shown in square brackets</p> <p>For example:</p> <p>[0..1] shows that the element can be present 0 times or 1 time. The element is optional</p> <p>[1..1] shows that the element can only be present 1 time. The element is mandatory</p> <p>[1..n] shows that the element is mandatory and can be present 1 to n times</p> <p>An element, that is part of a block of elements, is mandatory as far as the block it is part of, is present in the message.</p> <p>If only one of several elements may be present, this is indicated by {OR ... OR} before the elements concerned.</p>
Format	This specifies the permitted values and format

Definition	This contains the definition of the message block or element
Usage ISO	Additional info how this element must be used according to the ISO standards
Usage EPC	Any specific rules that could impact the presence or the values of an element as set in the SEPA Credit Transfer scheme customer-to-bank implementation guidelines
Usage NL	Any additional rules as set by the Dutch Payments Association specific for the Dutch community

Character set

The UTF-8 character encoding standard must be used in the UNIFI messages.

The Latin character set, commonly used in international communication, must be used.

It contains the following characters:

a b c d e f g h i j k l m n o p q r s t u v w x y z

A B C D E F G H I J K L M N O P Q R S T U V W X Y Z

0 1 2 3 4 5 6 7 8 9

/ - ? : () . , ' +

Space

Note: the above is about characters that can be used within the tags. For the message itself also other characters (especially < and >) can be used.

Message Structure

The description of the XML document models can be found in a number of schemes. A specific description language (XSD) is used in those schemes. The schemes make it possible to give a description of the tags in the document, the structure and sequence of those elements (hierarchy of tags) as well as the codes which are allowed for some specific data, the number of possible cases, the obligatory or optional character of some of the data, etc.

The general XSD for pain.001.001.03 can be downloaded from:

www.iso20022.org, under “Catalogue of ISO 20022 messages”, with “pain.001.001.03” as reference (www.iso20022.org/documents/messages/pain/schemas/pain.001.001.03.zip).

A file containing an XML- pain.001.001.03 message has the following structure:

```
<?xml version="1.0" encoding="UTF-8"?>
<Document xmlns="urn:iso:std:iso:20022:tech:xsd:pain.001.001.03"
xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
    <CstmrCdtTrfInitn>
        message content...
    </CstmrCdtTrfInitn>
</Document>
```

A file must contain one single Document (envelope), with one single XML message in it. See example in Annex F Example message.

The support of multiple documents per file must be agreed bilaterally with your bank.

The Customer Credit Transfer Initiation message is composed of 3 building blocks:

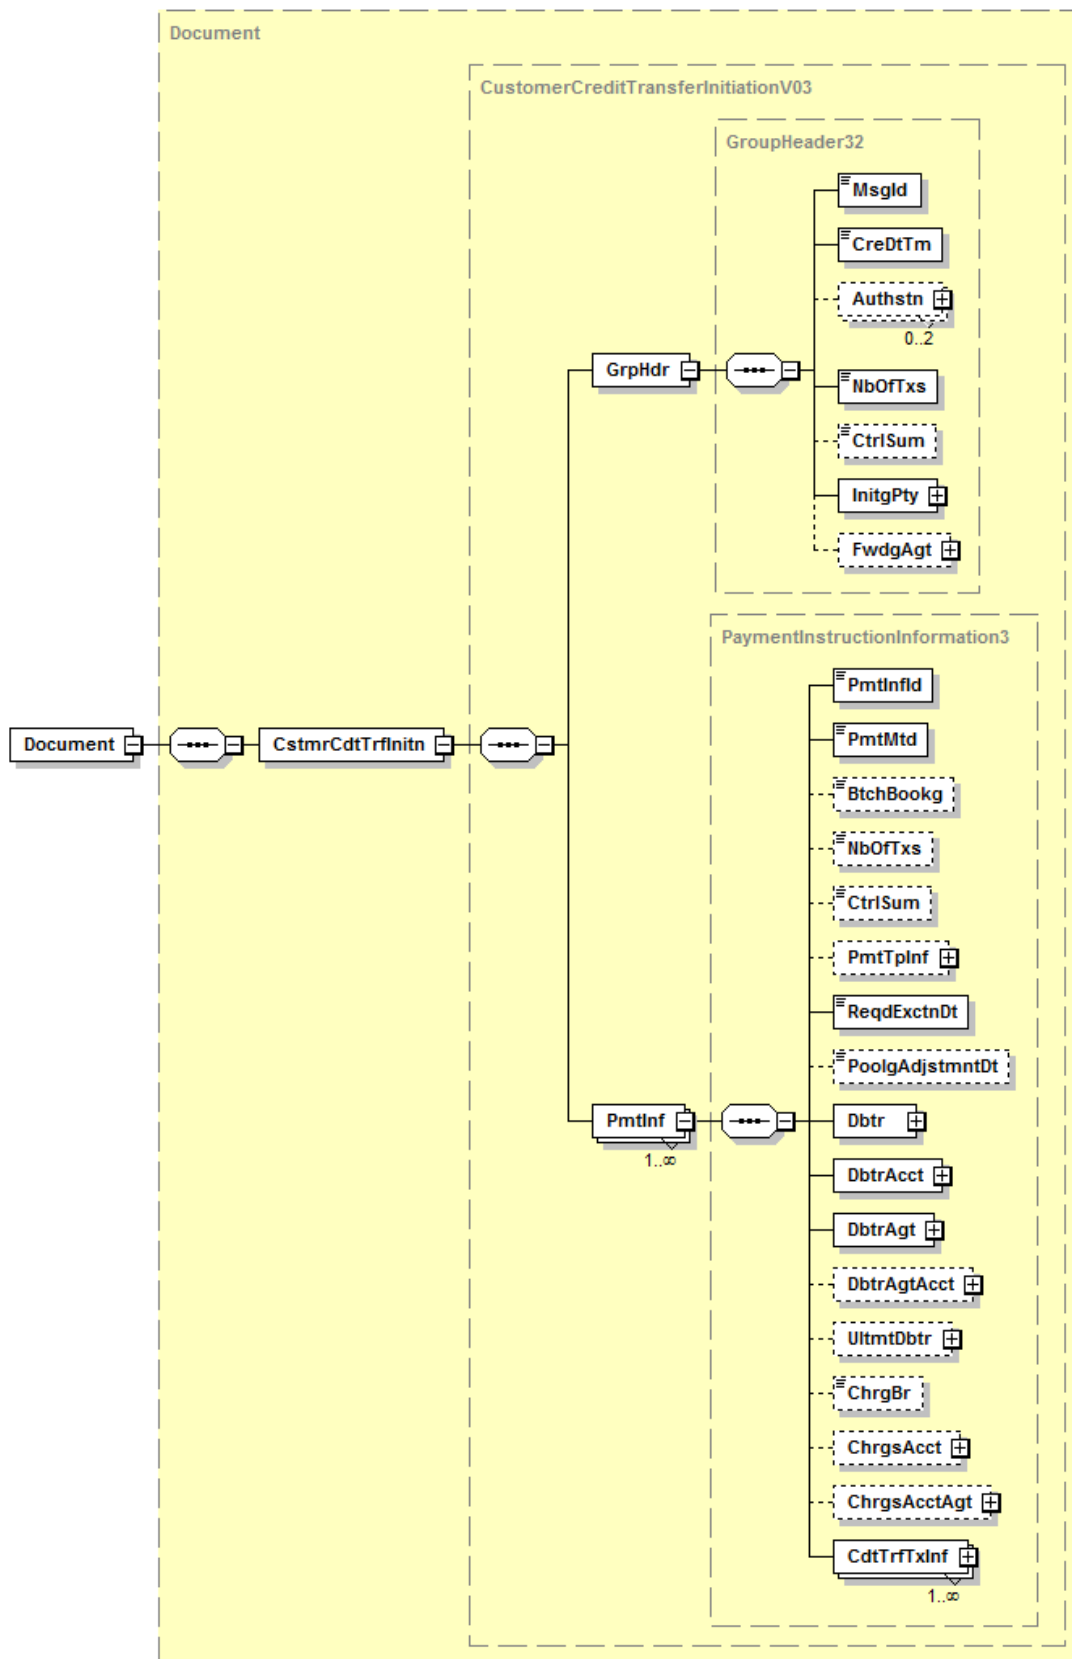

- A. **Group Header:** This building block is mandatory and present once. It contains elements such as Message Identification, Creation Date and Time, Grouping Indicator.
- B. **Payment Information:** This building block is mandatory and repetitive. It contains besides elements related to the debit side of the transaction, such as Debtor and Payment Type Information, also one or several Transaction Information Blocks.

- C. **Transaction Information:** This building block is mandatory and repetitive. It contains, amongst others, elements related to the credit side of the transaction, such as Creditor and Remittance Information.

The number of occurrences of Payment Information Block and Transaction Information Block within a message is indicated by the Grouping field in the Group Header. Only the following combination can be used :

A detailed view on the structure of a Credit Transfer Initiation Message is presented below.

Legend:

Box with full-line is a **mandatory** Message Element

Box with dotted line is an **optional** Message Element

The Child Elements must appear in the **sequence** mentioned

Only one of the possible Child Elements may be present (choice)

Annex D Overview ISO codes

The ISO 20022 Payment messages use 'external code lists' which are validated and approved by the Payments SEG.

The listed code values can be used in specific elements of the payments messages as indicated in the documents below. Unlike other ISO 20022 code lists, the code values are not included in the XML message schema with the message element they type. The purpose of externalising these code values is to be able to update the code lists (e.g. add new code values) without impacting the message themselves and, hence, without requiring the development of a new version of the messages that use these code lists.

25 external code lists are published in a spreadsheet which is versioned at three levels: the spreadsheet itself has a publication date, each list within the spreadsheet has a publication date (see 'CodeInventory' sheet) and each individual code value has a date of last update ('status date').

See www.iso20022.org, under “External Code Lists, Data Source Schemes (DSS), Variants and Supplementary Data”, with “External Code Lists spreadsheet” as reference (http://www.iso20022.org/External_Code_Lists_and_DSS.page).
